Kevin –

Yes, we will share the results when available. The wells in the first of the two planned well clusters (PW15) were constructed in late October and are still being developed. I expect they will be sampled in December and results available in January. The second well cluster won't be installed until we evaluate results from the first cluster.

Hello Wayne,

I recall in August, you had mentioned that two new monitoring wells were to be installed downgradient of PW13 and PW14. Do you know if those monitoring well installations been completed? If so, has the USEPA received any sampling results? Would it be possible for you to share those results with Riverside?

Thanks,  
Kevin
